

INTERACTIVE QUICK START GUIDE

NEW FEATURE FOCUS FOR JAN 2019 FIRMWARE RELEASE

Before trying the new device firmware, please ensure that you have the very latest copy of MIRA on your PC and that you update your device accordingly. Please locate the latest MIRA file here:

<https://pathme.de/support/#sw>

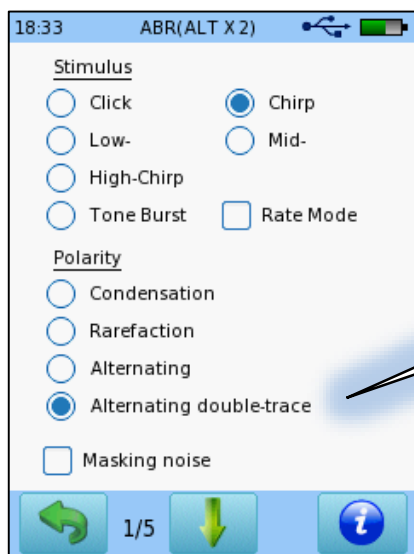

For instructions on how to install MIRA software, please refer to the Quick Start Guide: https://pathme.de/wp-content/uploads/quickguides/100800-13_Sentiero-Firmware-Update-Quick-Start-Guide.pdf

NEW FEATURES FOR ABR!

Please click on the "Watch the video" link throughout the document for additional information!

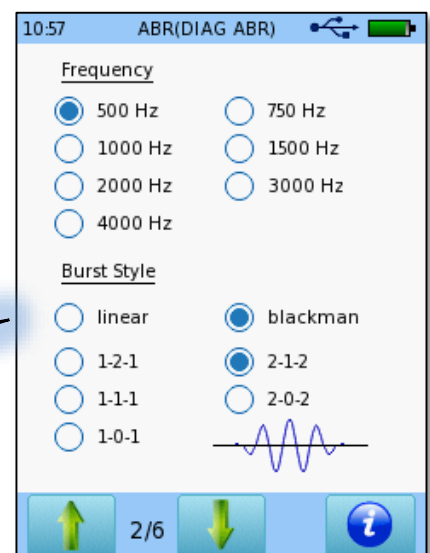

[Watch the video](#)

NEW SETTING OPTIONS **polarity & tone burst**

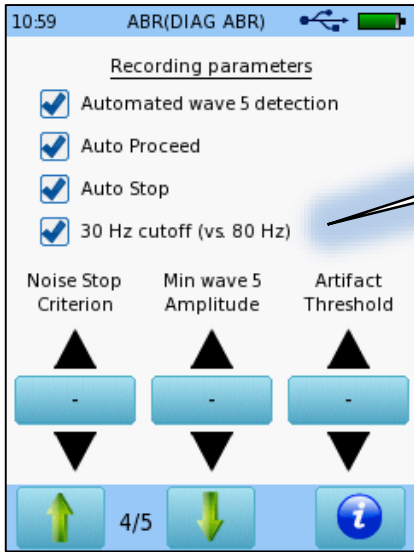

Polarity option allows separate averaging of condensation and rarefaction traces

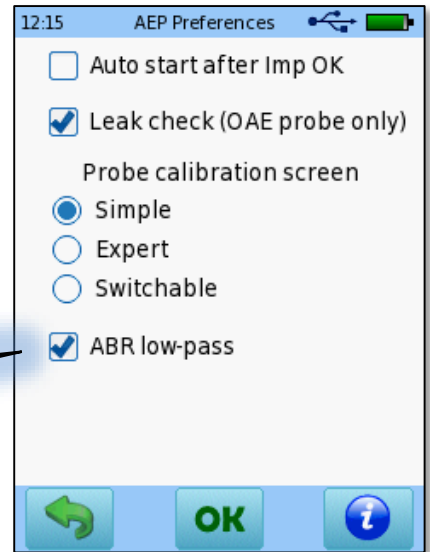

Tone burst ramp style now includes "Linear" and "Blackman"

NEW SETTING OPTIONS, filters

Hi-pass filter cut-off frequency (30/80hz)

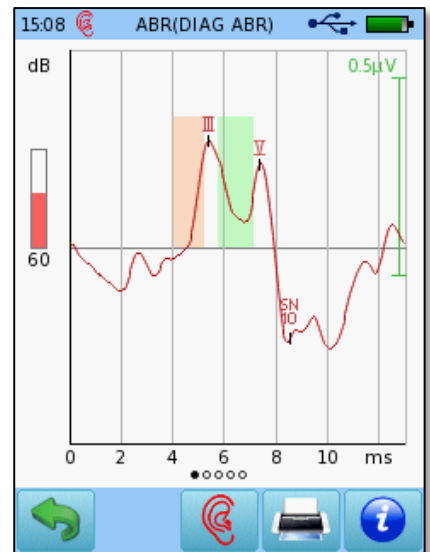

In AEP preferences setting page, ABR traces plot can be set to 1.5kHz (ticked) or 3kHz low-pass filtered

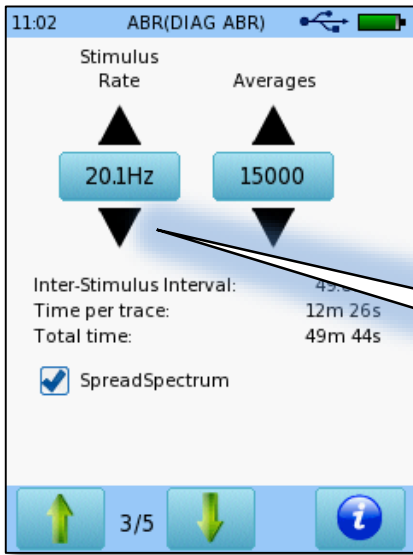

[Watch the video](#)

Long press on traces turns on/off low pass filter on test result

NEW SETTING OPTIONS **stimulus rates**

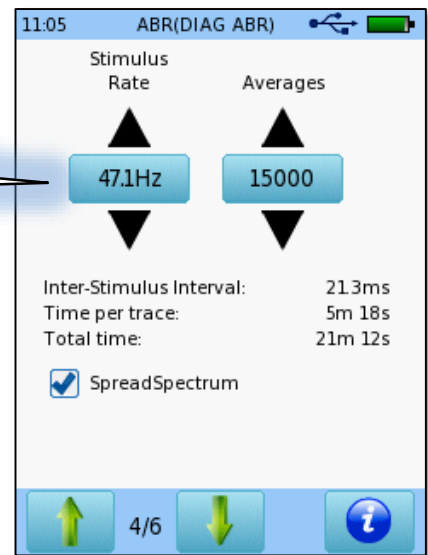

[Watch the video](#)

New default stimulus rates, ex.

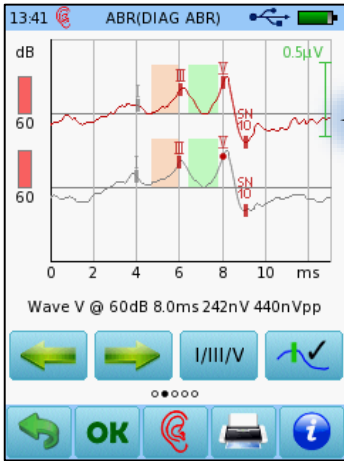

11.1Hz 20.1Hz 27.7Hz

Additional standard default rates for toneburst ABR

[Watch the video](#)

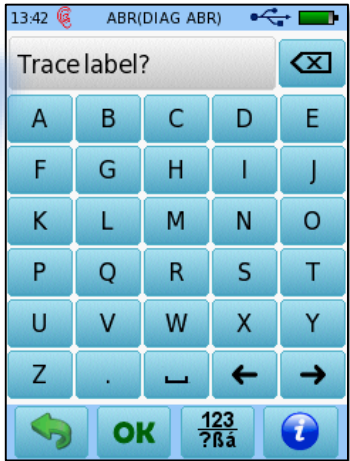

NEW SETTING OPTIONS **free text marking**

In peak settings mode, use "long press" on trace to bring up the label text mode

Type comments that you wish to add

[Watch the video](#)

Comments appear here

Free text can also be added to E-ABR traces for clear and easy electrode identification

NEW SETTING OPTIONS **peak marker and SN10 in run mode**

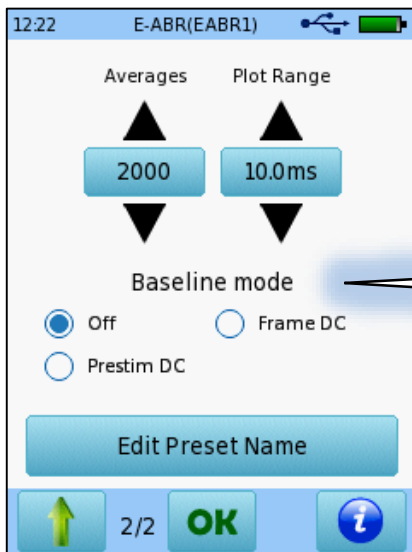

During test, SN10, I/III/V can be set for any traces completed

This trace currently running

[Watch the video](#)

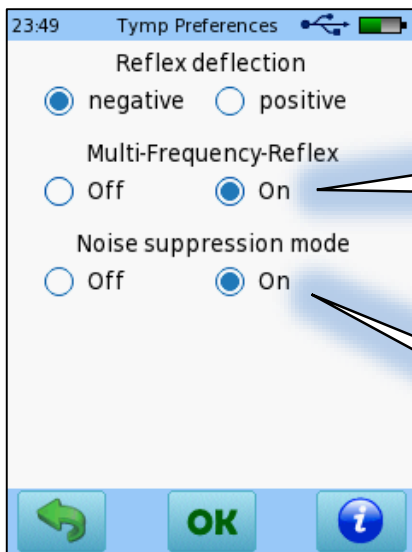

NEW FEATURE FOR E-ABR!

Additional setting option for defining the baseline for E-ABR traces

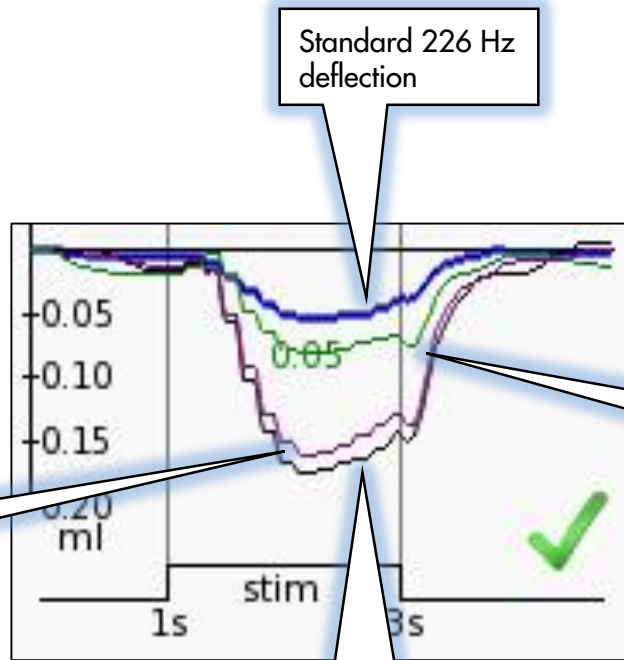

NEW EVALUATION FEATURE FOR TYMP

MULTI FREQUENCY REFLEX *evaluation only!*

From "Tymp preferences" switch this on to enable 3 additional reflex traces at extra probe frequencies: 678,904,1130 Hz.

New noise suppression mode: enables increased tolerance to movements during testing thus providing smoother reflex traces

Standard 226 Hz deflection

Increased deflection @ 1130 Hz

Increased deflection @ 904 Hz

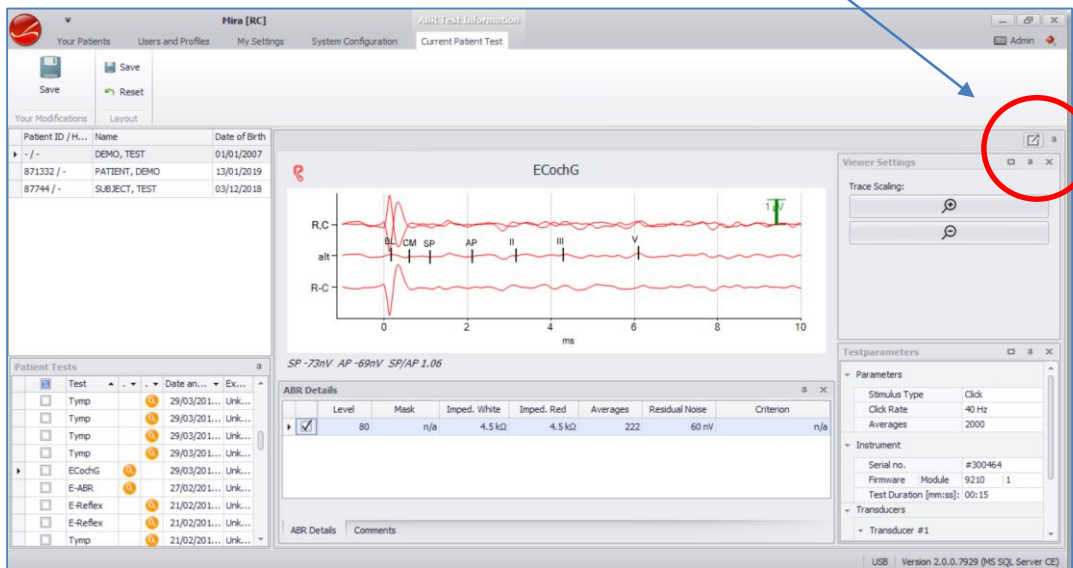

Increased deflection @ 678 Hz

[Watch the video](#)

With reference to the traces above, the standard 226 Hz probe tone is sufficient to enable auto stop at 85dB, but all of the other traces show increased deflection. **How does this help?** When testing patients with Hyperacusis we may be able to use lower stimulus levels to test the reflex. In the case of younger children, the reflex could also be tested at **lower levels** in order to not wake the child, resulting in a much more comfortable test for the patient.

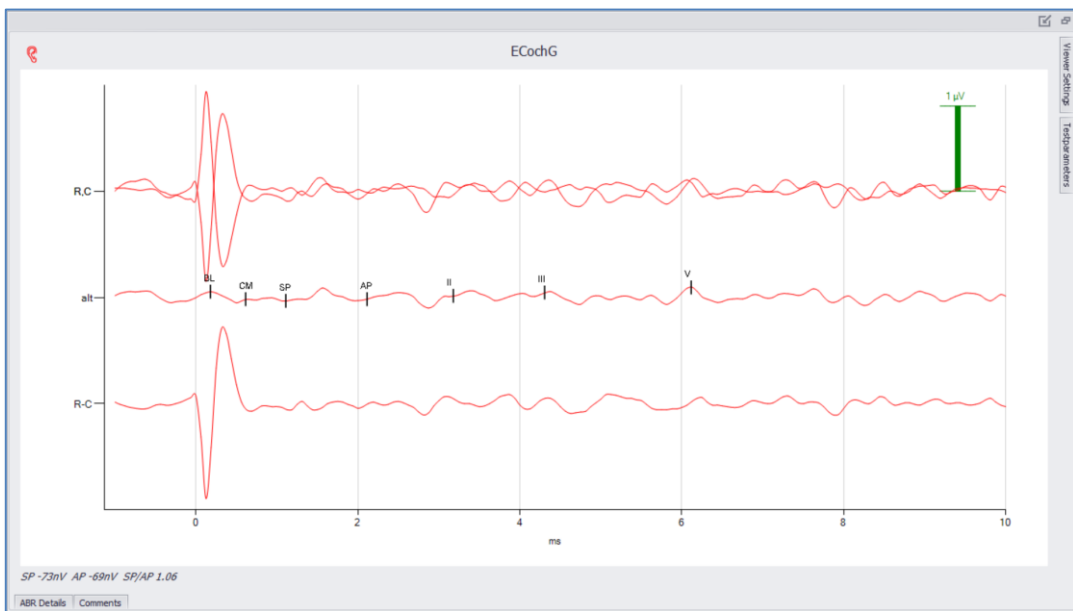

NEW FEATURES FOR MIRA PC software

NEW full size test result viewer, simply access this here:

SEE all test data in full size on your PC,
ABR/EcochG/OAE/PTA/TYMP/Speech

[Watch the video](#)

Manually move ABR traces

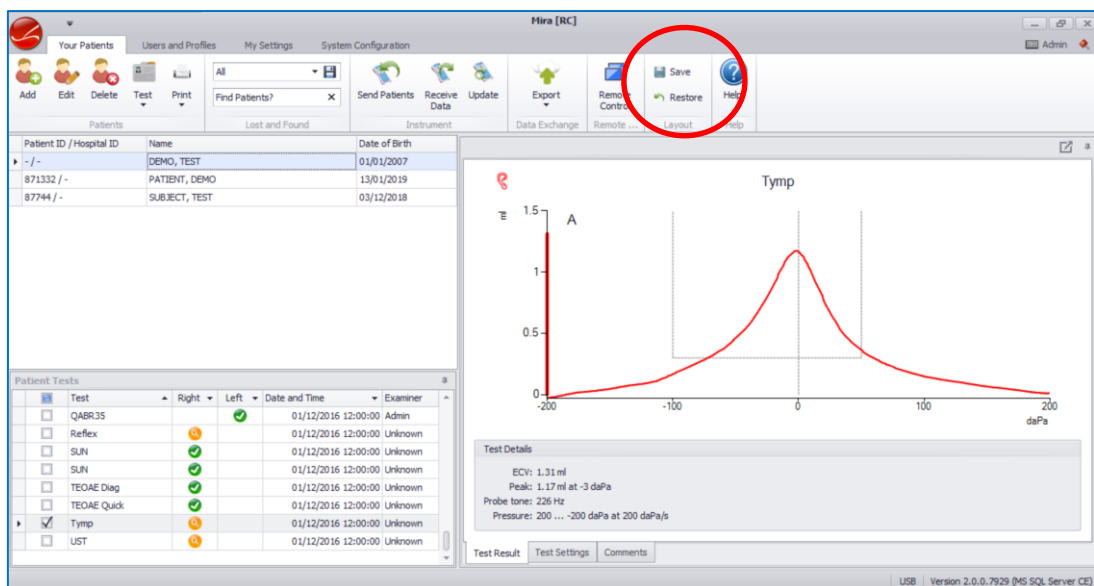

Individual traces can be moved to perform manual overlay of the traces:

- 1.) Left click your mouse over the level number displayed on the left (example 70)
- 2.) Move your mouse up or down whilst holding the left click down.

Save workspace selection for subsequent test review

Other MIRA enhancements:

- ❑ Additional flexibility for printing including changes to waveform position on ABR test and print result without saving.
- ❑ MIRA recalculates ABR traces in Weighted Average view when selecting/deselecting the same stimulus level for multiple traces.

Quick Guide Information

Release date: 2019-01-29
Revision: 100800-32_01
Valid from: Firmware Rev. 2.5.9582, Mira PC Software Rev. 2.0.0.7933
Applies to: SOH100360 and SOD100497

All mentioned items, products, brands and trademarks are registered or owned by the mentioned companies.
